

# PAINT TIN DRIP TRAY

The **PAINT TIN DRIP TRAY** is a brand new decorating tool developed by an individual who, after years of frustration caused by paint running down the side of tins and damaging other surfaces, decided there must be a better way.

After studying the range of tin sizes available, it became apparent that most paint tins in the UK conformed to standard sizes.

Could there be one simple product into which any tin could be placed when using a paint brush? Could that product also provide somewhere to rest the brush? The "**PAINT TIN DRIP TRAY**" was born!

The product would also have to stack efficiently for it to be appealing to retail outlets. The now universally accepted black plastic roller tray, used by us all, was the example to follow. Several prototypes later and after collaboration with a major U.K. manufacturer of decorating products the **PAINT TIN DRIP TRAY** was developed.

- designed and manufactured in the UK – with a Patent Pending
- accommodates most UK tin sizes from 250ml to 2.5 L
- the feet on the tray will accommodate paint brushes up to 75mm wide
- a right angle shelf on the tray fits neatly into any corner to catch drips

## WHERE AND WHEN

Tooling is complete and the product has been released onto the market. However, it will take some time for it to become readily available in all DIY stores and decorating outlets across the country. If you are reading this web page it is probably because you have heard about or seen one of the Trays and would like to know where you can get one.

We do not sell directly to the public but would ask you to approach your local decorating store with a print out of the image from our web site together with the product code which is **ADP-PTDT 1**. Their buying department should through the code be able to locate a wholesaler who can supply them with the product.

As with most decorating products the price will vary between stores.

## INFORMATION AND FEEDBACK

We would welcome any feedback or queries you may have about this new product.
